Limits and colimits

By

Walker Stern
(Bilkent University)

Abstract: We define limits and colimits in a quasi-category, and describe how they generalize both 1-categorical limits, and homotopy limits. We survey some theorems about the computation of limits and colimits — in particular, cofinality.

Talk III in the sequence of Higher Categories (HC).

Date: Monday, March 25, 2024

Time: 13:30

Place: SA141 - Mathematics Seminar Room & ZOOM
